Credits per cell / fixed colour bands / — = future date

Daily attribution uses session last-update dates in UTC. Zero means no retained allocation, not confirmed inactivity. Today's column, when present, is partial.

Data coverage

Retained local CLI sessions only; IDE activity is excluded. Cumulative session credits follow the last update date and recorded model. Sessions spanning months or switching models can distort daily/monthly allocations. Historical official totals are unavailable; local allocations need not match official consumption.
